<i>Single Substitutions</i>	
{doclogo}	When found, replace with the template element <i>DocLogo</i> – after processing <i>DocLogo</i> for any substitution codes.
{doctitle}	Replace with a processed <i>DocTitle</i>
{content}	Replace with the source HTML content for the page being enhanced.
{btncustom1}, {btncustom2}...	Replace with a processed template element ( <i>BtnCustom1</i> , <i>BtnCustom2</i> ...)
<i>Linear Navigation Substitutions</i>	
{btnprevious}, {btnhome}, {btnnext}	Replace with appropriate processed template element. When processing the template element, replace {url} with the proper link code and {text} with the proper descriptive text, based upon outliner information.
{urlprevious}, {textprevious}, {urlhome}...	Replace with appropriate links or descriptive text.
{color1}, {color2}...	Replace with the appropriate template element. Color template elements allow for heavy customization of existing templates.
<i>Hierarchical Navigation Substitutions</i>	
{level1}	Replace with a string that consists of a processed <i>Level_1</i> template element for each level 1 page node in the document. Also, use <i>Level_1_Active</i> for the level 1 node which is an ancestor of the page being created.
{level2}, {level3},...	Similar to {level1}, but for the defined level. Note: it is common to have a {level3} code in the <i>Level_2</i> template element – allowing for recursive navigational control.
{level1_text}, {level2_text}, ...	Replace with the appropriate descriptive text for the active page node at the specified level in the outliner.
{depth}	Replace with a number indicating the hierarchical depth of the target page's level.
{counter}	Replace with a sequential number for each instance of a level 1 element.
<i>Dropdown Navigation Substitutions</i>	
{menu_quickmenupro}, {menu_smartwebmenu1}, ...	Replace with javascript dropdown menu definitions for a specific dropdown menu product. For example, QuickMenuPro can be chosen and the proper javascript menu definitions for QuickMenuPro will be inserted.
